

SEO monitoring - September 2026

https://www.orslabs.fr/

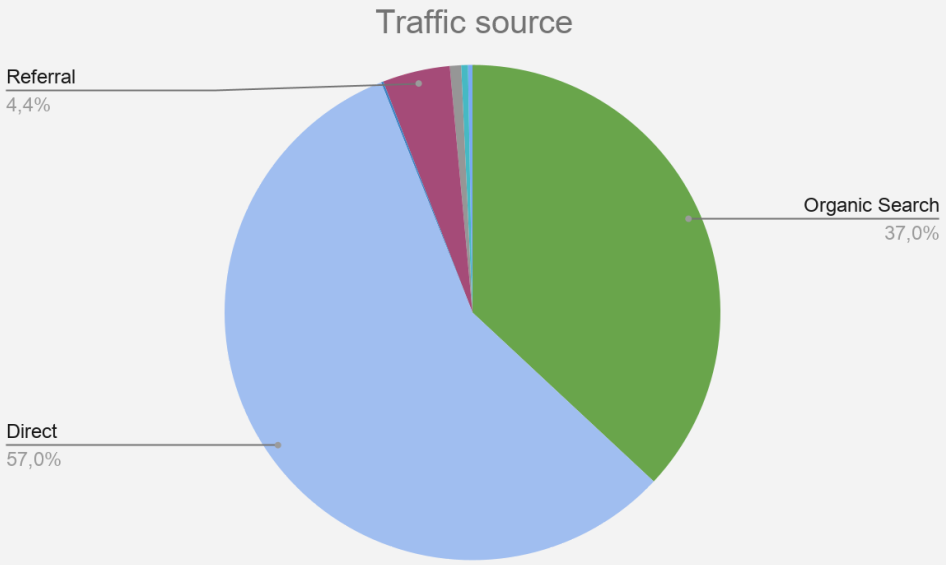

This report provides an overview of the SEO performance of the website orslabs.fr for the period **from September 1 to September 30, 2026**.

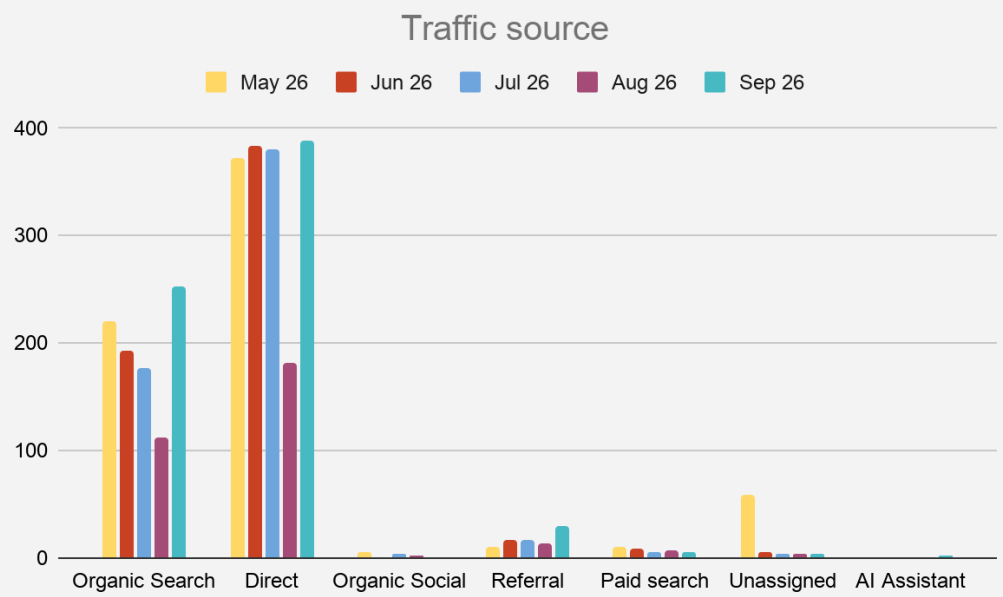

Note: the figures for the current month are compared with those for the previous months, but also with those for the previous year over the same period (if available).

No SEO updates to the site were made in August 2026.

5 linkedIn posts (7th, 14th, 23rd, 24th, 30th of September) were published and 3 newsletters (10th, 17th, 25th of September) were sent in September.

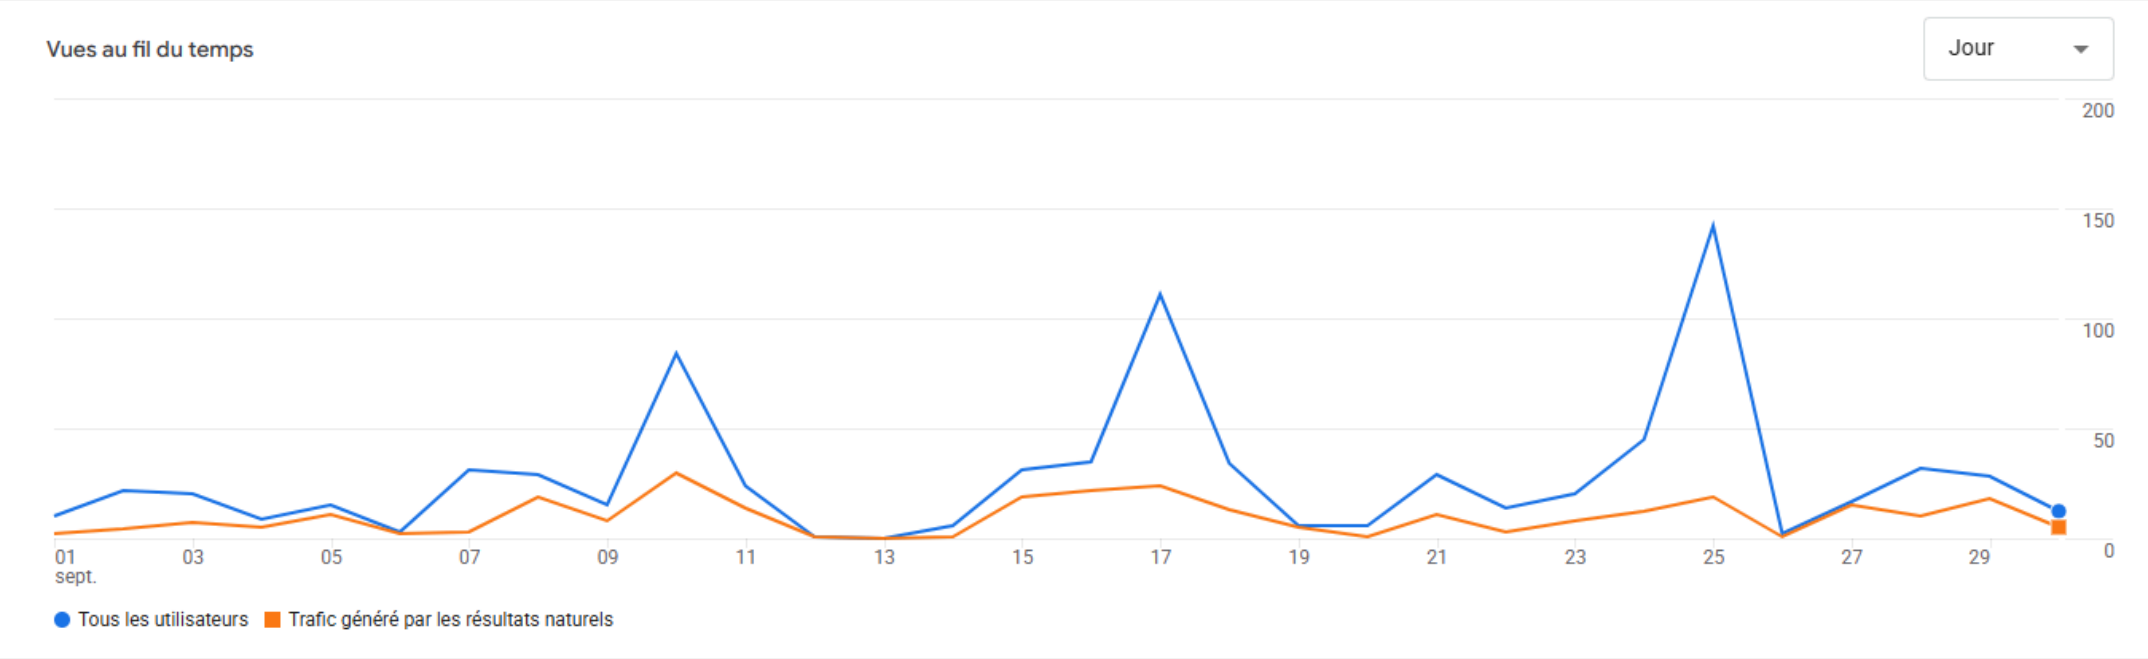

Traffic source

Source	Sep 26	Aug 26	Jul 26	Jun 26	May 26	Sep 25
Organic Search	**252**	112	177	193	220	209
Direct	**389**	182	381	384	372	204
Organic Social	**1**	2	3	0	6	
Referral	**30**	13	16	16	10	12
Paid search	**5**	7	6	9	10	60
Unassigned	**3**	4	3	5	58	59
AI Assistant	**2**					

Organic clicks vs. all clicks over the month (per day)

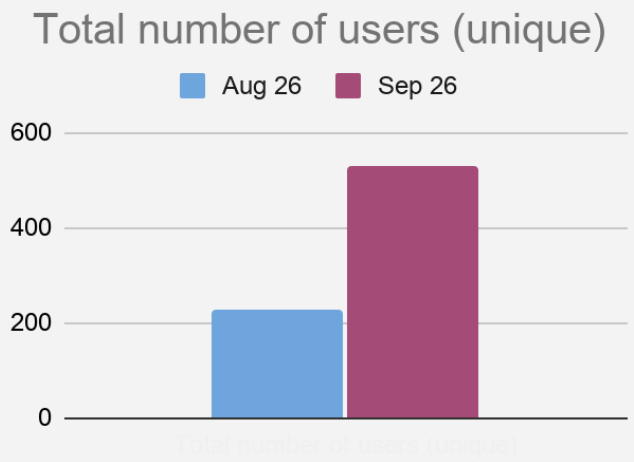

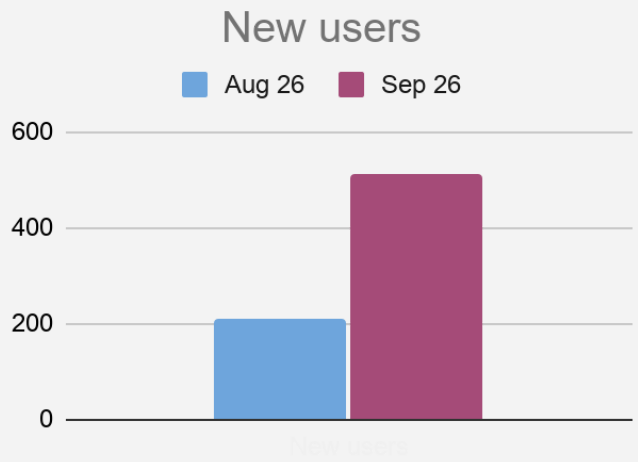

📌 **Notes** :

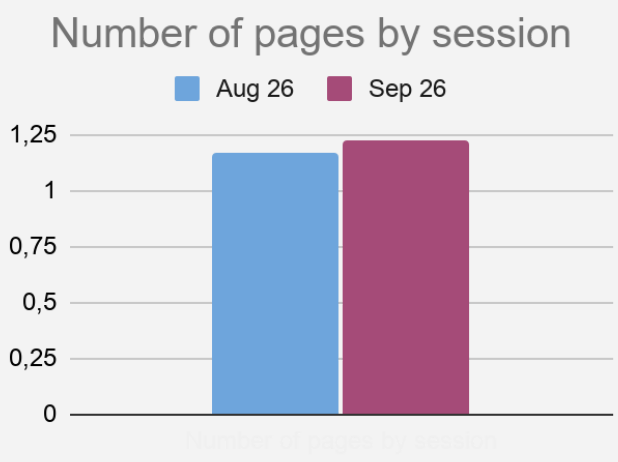

- **Organic search** more than doubled to 252 sessions (+125% vs August), its highest level over the period covered, and 42% above July.
- **Direct traffic** returned to its spring level with 389 sessions (+114% vs August, +2% vs July), with three daily peaks matching the newsletter send dates.
- **Referral traffic** reached 30 sessions, nearly double its previous high (16 sessions in June and July).
- **Organic social** remained marginal with 1 session, despite 5 LinkedIn posts published during the month.
- **Paid search** (5 sessions) and **unassigned traffic** (3 sessions) remained residual.
- **AI Assistant** appears for the first time as a separate channel, with 2 sessions. The volume is negligible but the channel is worth tracking from now on.

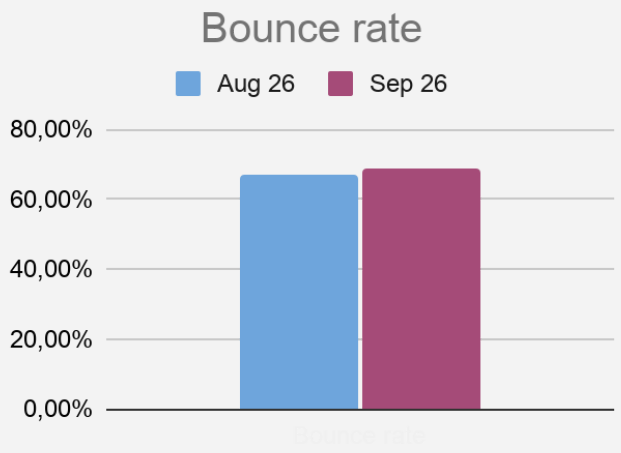

👉 **Key takeaway**: September confirms the post-summer recovery and goes beyond it. With 683 sessions, the month is the strongest of the period since January 2026, 17% above July. The rebound is broad: organic search, direct and referral all grew at once. Organic search now accounts for 37% of all sessions (35% in August, 30% in July), while direct remains the first channel with 57%. The daily curve shows, however, that a significant part of it is campaign-driven: the three highest peaks of the month fall exactly on the newsletter send dates of 10, 17 and 25 September, with smaller peaks around the LinkedIn publication dates of 7, 14, 23, 24 and 30 September. Since organic social recorded only 1 session over the whole month, this campaign traffic is being counted as direct, which overstates the direct channel and makes the real contribution of the newsletter and of LinkedIn impossible to measure. Adding UTM parameters to both would resolve this from next month onwards.

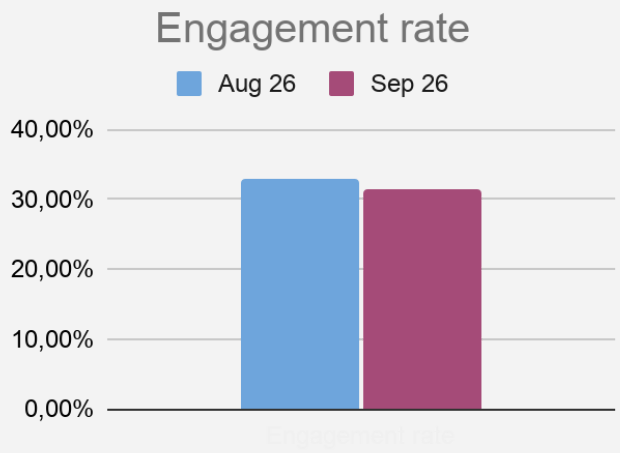

User behavior

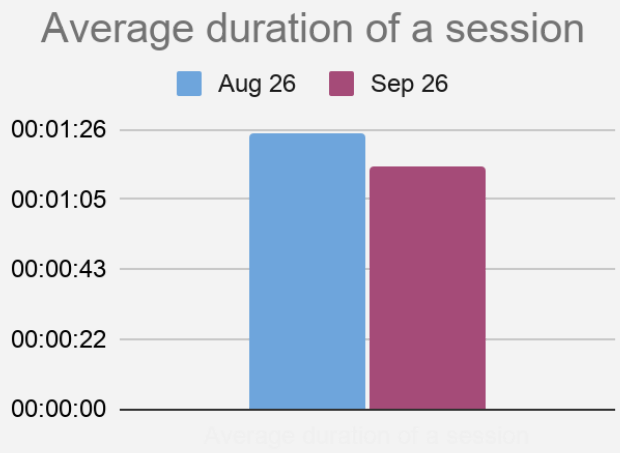

KPI	Sep 26	Aug 26	Jul 26	Jun 26	May 26	Sep 25
Total number of users (unique)	**530**	225 (136%)	466 (14%)	473 (12%)	525 (1%)	420 (26%)
New users	**510**	207 (146%)	441 (16%)	450 (13%)	501 (2%)	341 (50%)
Number of sessions	**683**	320 (113%)	586 (17%)	607 (13%)	677 (1%)	544 (26%)
Number of pages by session	**1,22**	1,17 (4%)	1,18 (3%)	1,23 (-1%)	1,10 (11%)	1,26 (-3%)
Bounce rate	**68,52%**	67,19% (1,33)	73,04% (-4,52)	67,55% (0,97)	70,01% (-1,49)	61,76% (6,76)
Engagement rate	**31,48%**	32,81% (-1,33)	26,96% (4,52)	32,45% (-0,97)	29,99% (1,49)	38,24% (-6,76)
Average duration of a session	**0:01:15**	0:01:25 (-0:00:10)	0:01:35 (-0:00:20)	0:01:25 (-0:00:10)	0:01:22 (-0:00:07)	0:01:50 (-0:00:35)

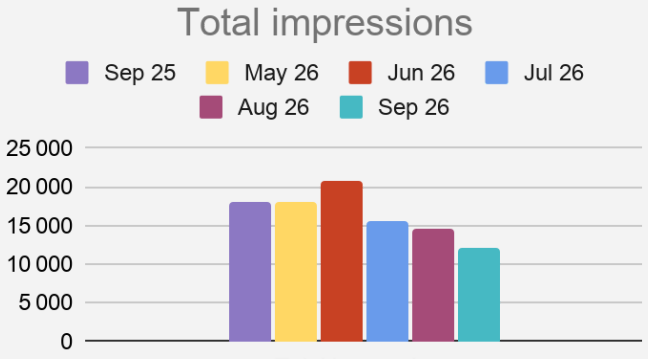

📌 **Notes** :

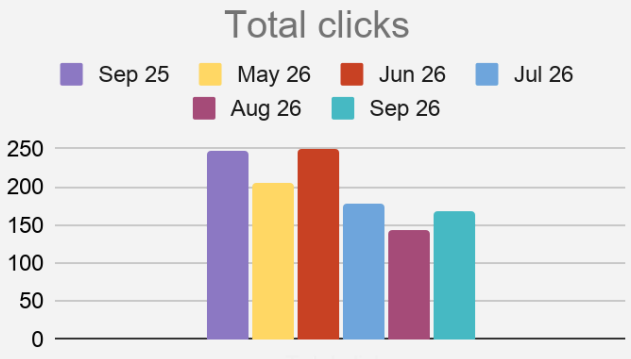

- **Users (total and new)** rose to 530 and 510 respectively (+136% and +146% vs August, +14% and +16% vs July).

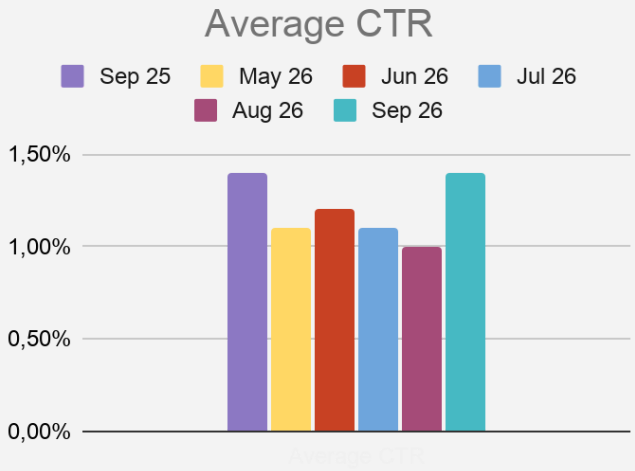

- **Sessions** reached 683 (+113% vs August, +17% vs July).
- **Pages per session** improved slightly to 1.22 (+4% vs August).
- **Engagement rate** eased to 31.48% (-1.33 points vs August) but remains well above July (26.96%).
- **Session duration** decreased to 1:15 (-10 seconds vs August, -20 seconds vs July).

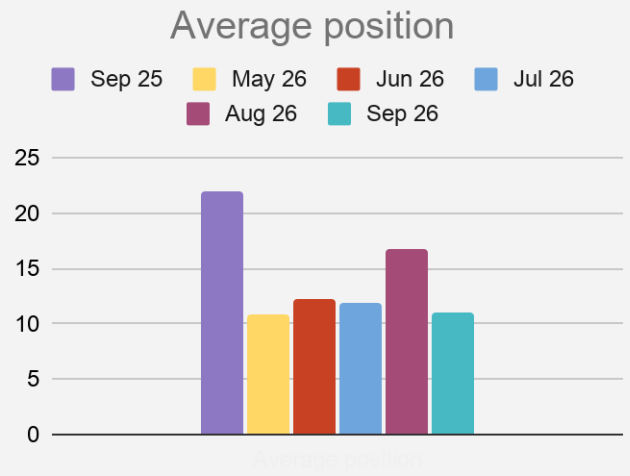

👉 **Key takeaway**: volume came back without diluting the quality of the audience. Pages per session improved and the engagement rate stayed close to its August level, well above July. Session duration is the one metric moving the wrong way. With 96% of users being new and 1.22 pages viewed per session, the site is still working as a single-answer destination: visitors find the tool or the technical page they were looking for and leave. Turning those visits into deeper journeys remains the main structural opportunity.

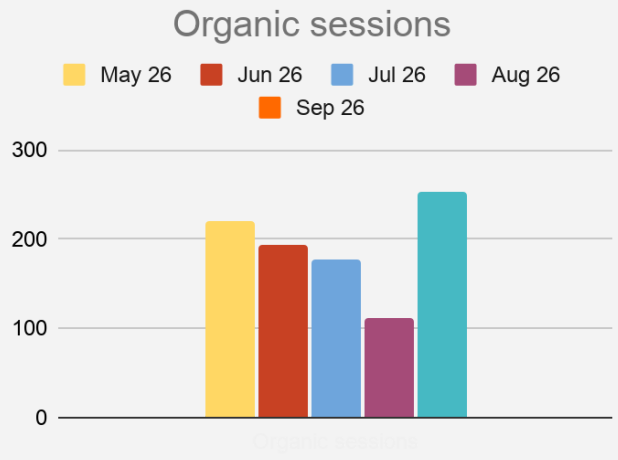

SEO Performance Summary

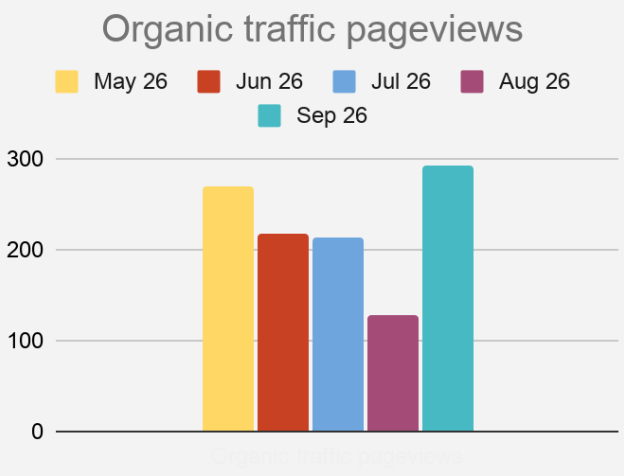

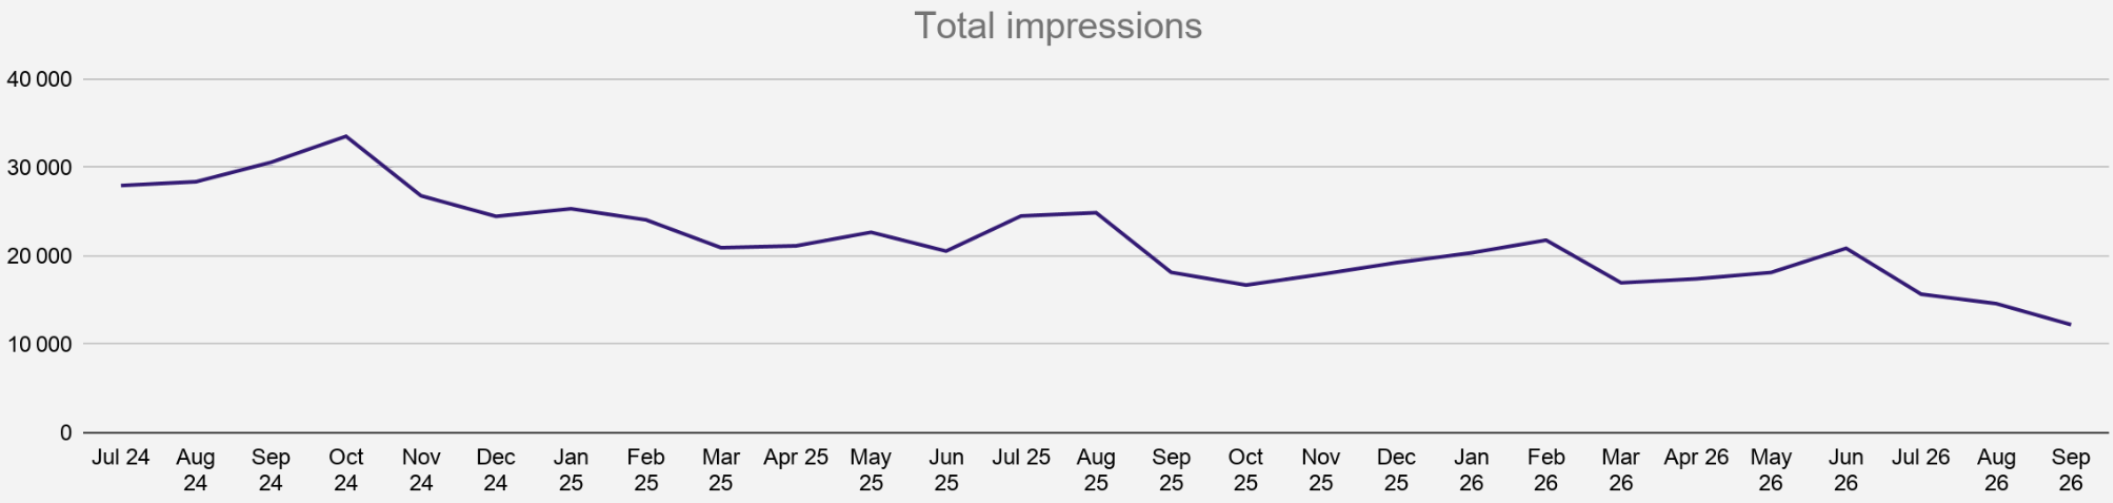

KPI	Sep 26	Aug 26	Jul 26	Jun 26	May 26	Sep 25
Total impressions	**12 202**	14 592 (-16%)	15 658 (-22%)	20 858 (-41%)	18 121 (-33%)	18 135 (-33%)
Total clicks	**168**	142 (18%)	179 (-6%)	249 (-33%)	205 (-18%)	246 (-32%)
Average CTR	**1,40%**	1,00% (40%)	1,10% (27%)	1,20% (17%)	1,10% (27%)	1,40% (0%)
Average position	**11**	17 (-34%)	12 (-7%)	12 (-9%)	11 (3%)	22 (-50%)
Organic sessions	**252**	112 (125%)	177 (42%)	193 (31%)	220 (15%)	209 (21%)
Organic traffic pageviews	**293**	129 (127%)	213 (38%)	218 (34%)	271 (8%)	265 (11%)

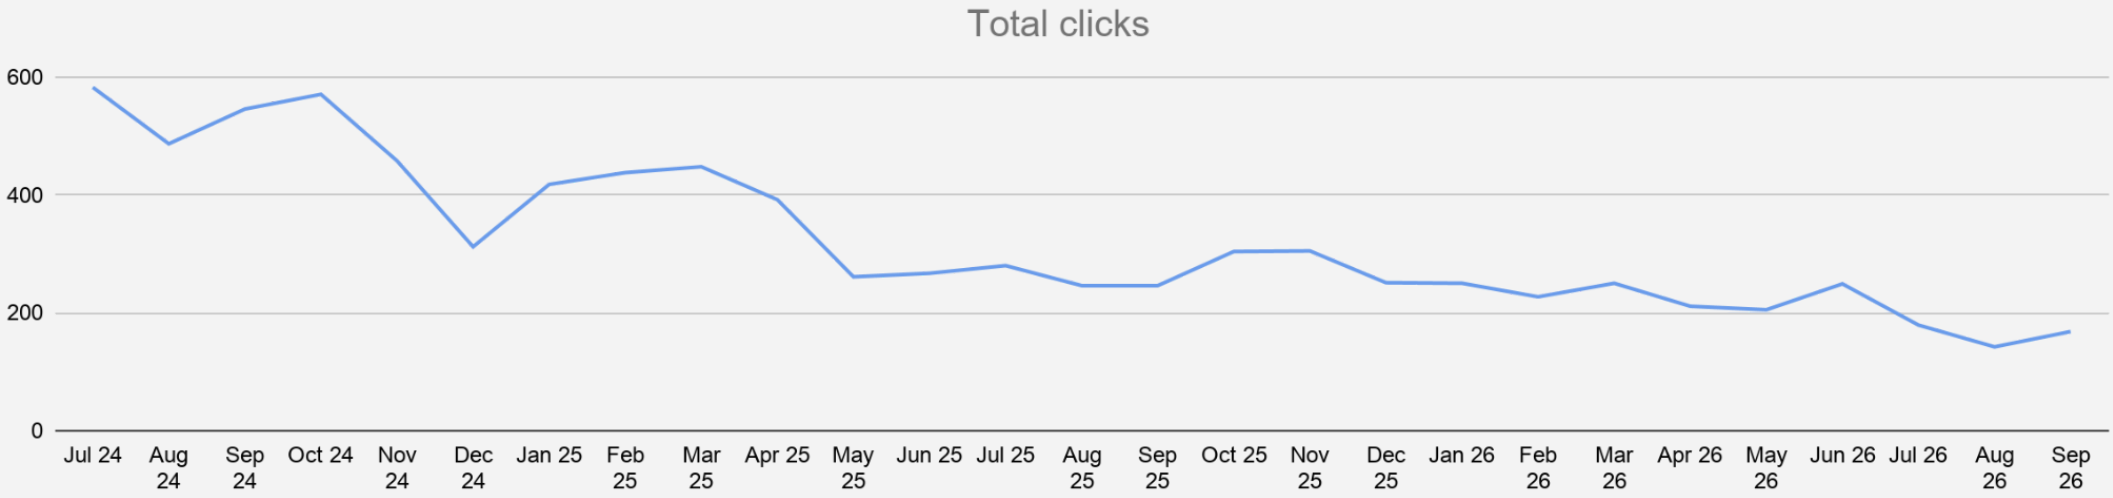

📌 **Notes** :

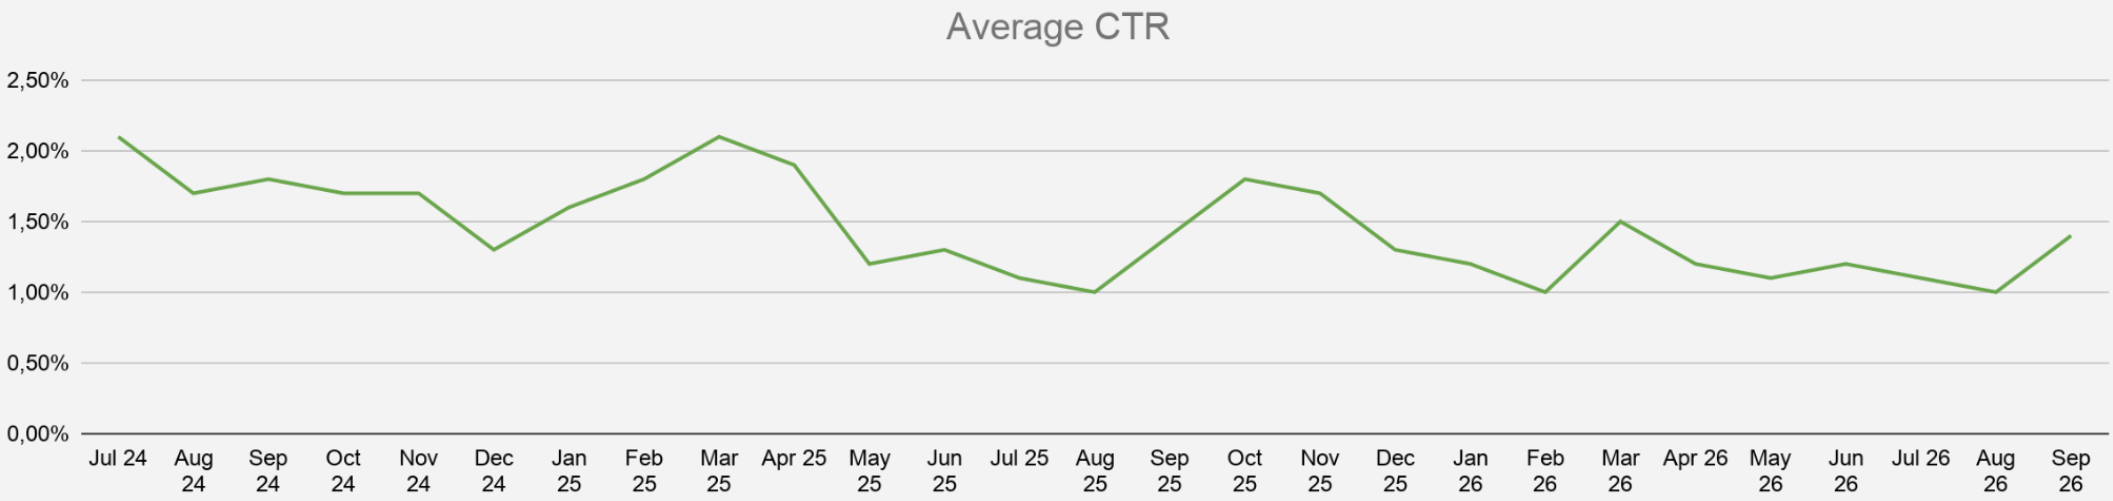

- **Impressions** decreased to 12 202 (-16% vs August).
- **Clicks** rose to 168 (+18% vs August).
- **CTR** jumped to 1.40% (+0.4 point), its best level since March 2026.
- **Average position** improved from 17 to 11, recovering the ground lost in August and returning to its May level.
- **Organic sessions** more than doubled to 252 (+125% vs August).
- **Organic pageviews** rose to 293 (+127% vs August), i.e. 1.16 pages per organic session.

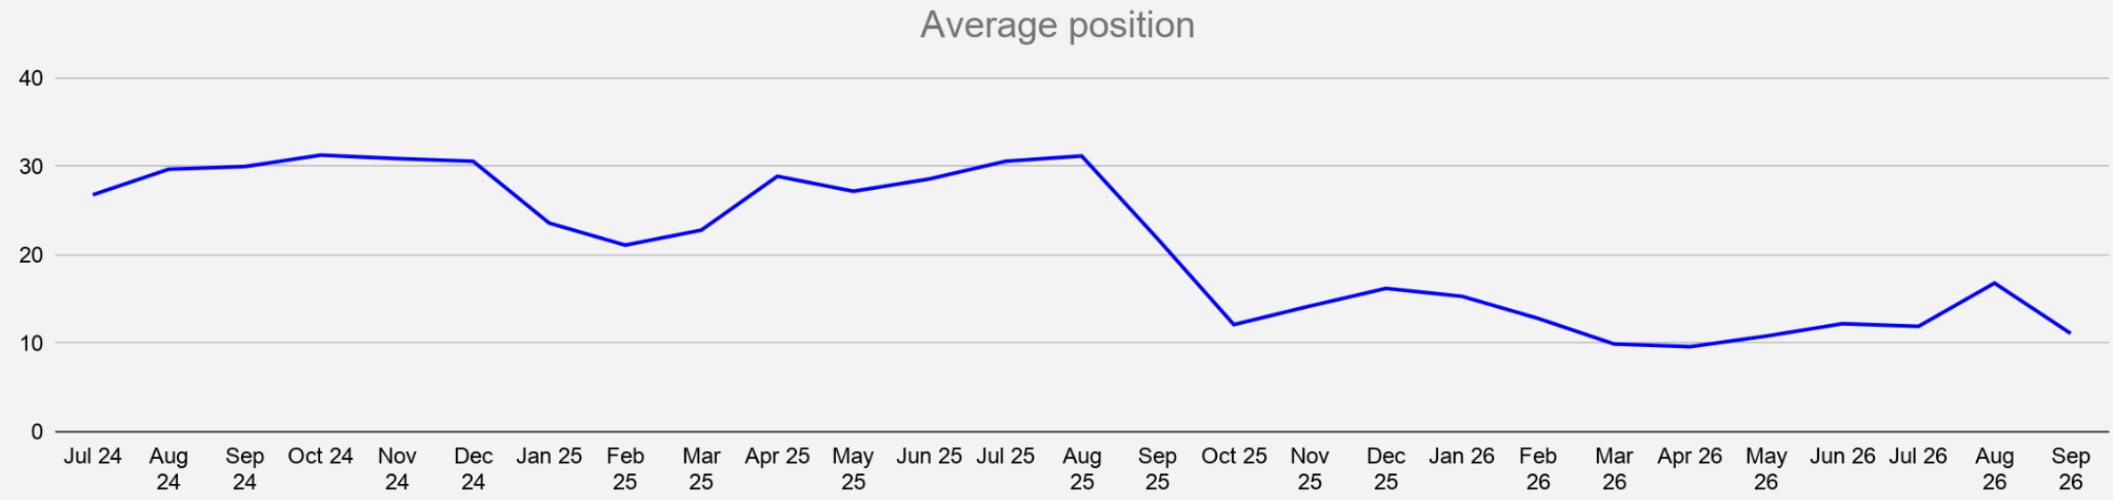

👉 **Key takeaway**: September reverses the August pattern. The site is shown on fewer queries but ranks far better on those it does appear for: impressions fell by 16% while clicks rose by 18% and the average position gained six places. The ranking loss recorded in August was therefore temporary. The structural point is now the impression base itself, down 41% since June.

SEO Performance Evolution

👉 **Key takeaway:** the long-term view shows two different trajectories. The average position has been fluctuating in a narrow band since autumn 2025 and is back at 11, which means August was an accident rather than a trend. Impressions, on the other hand, have been declining steadily since June and

are now at their lowest point of the period, while clicks remain below every monthly level recorded in 2025. The site ranks better than it has in two years, on a shrinking volume of searches.

ℹ️ **Major Google algorithm updates over the last 12 months:**

February 2026 — Discover core update (Feb 5 to Feb 27): the first core update dedicated exclusively to the Google Discover feed. No direct impact expected on a B2B technical site.

March 2026 — spam update (Mar 24-25) and **core update** (Mar 27 to Apr 8): the first broad core update of the year, centred on content quality and E-E-A-T signals. No new ranking signal was introduced; what changed is the way each page is weighed against the other candidates for a given query.

May 2026 — core update (May 21 to Jun 2): the second core update of the year, with high volatility throughout the rollout. This period coincides with the start of the erosion in the site's average position (10 in April, 11 in May, 12 in June, 17 in August).

June 2026 — spam update (Jun 24-26), **August 2026 — spam update** (Aug 18-21) and **September 2026 — spam update** (from Sep 24): three standard updates targeting practices already covered by Google's spam policies — content produced at scale, automated or copied content, link schemes. The September update was announced with a rollout window of up to two weeks, meaning it was still in progress at the end of the month.

Consequences for orslabs.fr: the site does not use any of the practices targeted by these updates. A spam update nevertheless moves competitors as well, which changes the site's average position without anything having changed on the site itself — this most likely explains the August variation, now fully reversed. Because the September update started on 24 September and was still rolling out at month-end, its effect on the site will only be measurable in the October figures.

Top performing organic queries

Top 10 keywords driving clicks

Most frequent queries driving clicks	Clicks	Impressions	CTR	Position
oneida recherche services	4	12	33,3 %	2,1
gross leak test	3	218	1,4 %	7,5
ors lab	3	18	16,7 %	8,1
oneida research services	1	231	0,4 %	7,1
internal vapor analysis	1	74	1,4 %	12,4
oneida research services inc	1	71	1,4 %	9,5
moisture calculator	1	36	2,8 %	7,7
gross leak testing	1	23	4,3 %	6,2
ors calculator	1	20	5 %	6,1
mil-std 883 method 1014	1	16	6,3 %	14,4

Top 10 keywords driving impressions

Most frequent queries driving impressions	Clicks	Impressions	CTR	Position
hermeticity	0	710	0 %	7,4
gross leak bubble tester	0	247	0 %	16,2
oneida research services	1	231	0,4 %	7,1
gross leak test	3	218	1,4 %	7,5
ors labs	0	175	0 %	14,6
orslabs	0	142	0 %	11,4
internal vapor analysis testing	0	83	0 %	12,1
internal vapor analysis	1	74	1,4 %	12,4
oneida research services inc	1	71	1,4 %	9,5
outgassing studies	0	69	0 %	5,7

📌 **Notes** :

- Search performance continues to be driven by a combination of branded searches and highly specialised technical queries.
- **Branded queries now drive most of the measured clicks**: "oneida recherche services" (4 clicks, position 2.1, CTR 33.3%) and "ors lab" (3 clicks, CTR 16.7%) are the two best-converting queries of the month.
- **The brand SERP remains only half secured**: "ors labs" and "orslabs" together generated 317 impressions and no click at all, at positions 14.6 and 11.4.
- **"Gross leak test"** remains the main non-branded query driving clicks, with 3 clicks and 218 impressions at position 7.5, and is joined by the related query "gross leak testing" (position 6.2, CTR 4.3%).
- **"Gross leak bubble tester"** still generates significant exposure (247 impressions) without a single click, at position 16.2 on page two.
- **The IVA topic converted for the first time**: "internal vapor analysis" generated its first click, and "internal vapor analysis testing" re-entered the impressions table with 83 impressions.
- **New highly qualified queries appeared**, in particular "mil-std 883 method 1014" and "outgassing studies" (position 5.7), both pointing to a very specific professional intent.

👉 **Key takeaway**: the queries bringing clicks are almost all branded or directly tied to a named test method, which confirms that ORS Labs converts best when the searcher already knows what they are looking for. Two gaps remain. The brand SERP is incomplete: the two main spellings of the company name rank beyond position 11 and generate no click. And several specialised technical queries sit on page two, where exposure exists but traffic does not follow.

Most visited pages via natural referencing

Most popular pages	Clicks			Impressions			CTR			Position		
	Sep 26	Aug 26	Difference	Sep 26	Aug 26	Difference	Sep 26	Aug 26	Difference	Sep 26	Aug 26	Difference

/en/gas-analysis/iva/	3	1	**2**	448	575	**-127**	0,7 %	0,2 %	**0,5 %**	14,1	18,9	**-4,8**
/pdf/ORS France - Etudes de Degazage.pdf	3	0	**3**	83	84	**-1**	3,6 %	0 %	**3,6 %**	24,5	26,5	**-1,9**
/en/about/locations/	2	0	**2**	556	589	**-33**	0,4 %	0 %	**0,4 %**	10,2	10,9	**-0,6**

📌 **Notes** :

- The **English Moisture Calculator** page gained 8 clicks on 35% fewer impressions. Its average position gained more than 10 places (8.2 vs 18.4) and its CTR rose to 1.8%.
- The **French Humidity Conversion** page is the only major page to lose ground, at 25 clicks (-11), with a CTR down to 3.4%.
- The **French home page** improved sharply, from 6 to 19 clicks, with a 14.2% CTR and an average position of 6.2 — the best-converting page of the table.
- The **Gross Leak Test** page gained clicks (10, +3) on a stable impression base, but its CTR remains below 1% at position 14.9.
- The **HSHLD** page nearly doubled its exposure (673 impressions, +297) and its clicks (6, +3).

- The **IVA page** confirms the trend observed on queries, with 3 clicks and a position improving by nearly 5 places.
- **Two pages concentrate the largest unconverted exposure**: the English home page (865 impressions, 0.5% CTR) and the Locations page (556 impressions, 0.4% CTR).
- **Technical PDF documents** remain visible, with a new entry, "Etudes de Degazage", recording its first clicks.

👉 **Key takeaway**: nine of the ten pages improved their average position, and the main pages converted better on a smaller impression base — the exact opposite of what was observed in August. The French home page and the Moisture Calculator show what the site can achieve when ranking and intent align. The remaining gap is concentrated on two pages (home EN and locations) that generate more than 1 400 impressions for 6 clicks combined, where a title and meta description review would have an immediate effect.

Conclusion

September confirms the post-summer recovery and exceeds it. With 683 sessions, 530 users and 252 organic sessions, the month is the strongest month since January 2026. Organic search, direct and referral all grew at the same time, although the direct rebound is largely explained by the three newsletters sent during the month.

The recovery is also visible in search performance. Clicks rose by 18%, CTR reached 1.40% — its best level since March — and the average position returned from 17 to 11, recovering in full the ground lost in August. The ranking loss recorded last month was therefore temporary, and most likely linked to the volatility of the August spam update rather than to a problem with the site itself. Nine of the ten main landing pages improved their average position.

One indicator moves against this trend. Impressions fell by a further 16% to 12 202, a third consecutive monthly decline that brings them 41% below their June level and to their lowest point over the period covered. The site is now shown on fewer searches than at any point in the last two years, while better ranking on those it does appear for.

The analysis of queries and pages points to the same two levers as in previous months. Organic traffic remains concentrated on a small number of tool pages, and a significant share of the visibility is still not converted: the English home page and the Locations page together generate more than 1 400 impressions for 6 clicks. On the other hand, the French home page shows what a well-aligned page can do, with a 14.2% CTR.

The performance of the technical PDF documents remains mixed, but several continue to generate organic visibility, including a new entry this month. This supports the existing strategy of identifying the most promising PDFs and progressively transforming them into optimized HTML landing pages, in order to make better use of existing expert content, strengthen internal linking and convert existing search visibility into additional qualified traffic.

Overall, September is a good month on every indicator that depends on the site's own performance. The point to watch is the one that does not: the continuing erosion of the impression base. October will also be the first full month to reflect the September spam update, which started on 24 September and was still rolling out at month-end.

👉 **Strategic priorities** for the coming months:

- **Improve CTR** on the pages and queries that already generate impressions (including English home page and Locations page).
- **Secure the brand SERP**: "ors labs" and "orslabs" should not rank beyond position 10.
- Build on the **IVA and gross leak topics**, which are gaining traction on both queries and pages.
- **Strengthen internal linking** from the tool pages towards the service and contact pages, to lift pages per session above 1.22.
- **Leverage technical PDF content** by transforming key documents into optimized landing pages integrated within the site architecture.

👉 **Actions**:

- Publish the proposed content (sent in December) on /outils/conversions-dhumidite/ page (french and english versions) — Status: paused, waiting approval from ORS Labs.
- Rework content of the /tests-dhermeticite/hshld/ page based on the new proposed structure — Status: paused, waiting structure approval from ORS Labs.
- Identify high-visibility PDF documents and prioritize their conversion into structured HTML pages to enhance SEO impact and lead generation potential: we could start with Variable_leak_rate_phenomena_in_glass_to_metal_seals.pdf if you agree with the proposition. — Status: paused, waiting approval from ORS Labs regarding the proposal.
- Publish to proposed meta data for Gross Leak Test page — Status: paused, waiting approval from ORS Labs.
- Set up UTM tagging on LinkedIn posts and newsletters, so that campaign traffic stops being counted as direct

Glossary

SEO (Search Engine Optimization): Set of techniques aimed at improving a website's visibility in search engine results.

SERP (Search Engine Results Page): The page displayed by search engines (Google, Bing, etc.) showing results in response to a query.

Internal linking: The organization of a website's internal links that connect different pages together to improve navigation and search engine indexing.

Crawl: The process by which search engine bots browse and analyze a website's pages to decide whether or not to add them to their index.

Indexable: Describes a page that can be added to a search engine's index and therefore appears in search results. A non-indexable page will not be shown in the SERP.

Backlinks: Inbound links coming from other websites and pointing to a given site.

Impressions: The number of times a link appears in search engine results, regardless of whether it is clicked or not.

CTR (Click-Through Rate): The percentage of users who clicked on a link compared to the total number of impressions of that link in the SERP.

PAA (People Also Ask): A section in Google results displaying frequently asked questions related to the query, with answers from various websites.

Canonical URL: The canonical URL indicates which version of a page should be considered as the main one by search engines. It helps prevent duplicate content issues when multiple pages have very similar content.
