SEO monitoring - August 2026

<https://www.orslabs.fr/>

This report provides an overview of the SEO performance of the website orslabs.fr for the period **from August 1 to August 31, 2026**.

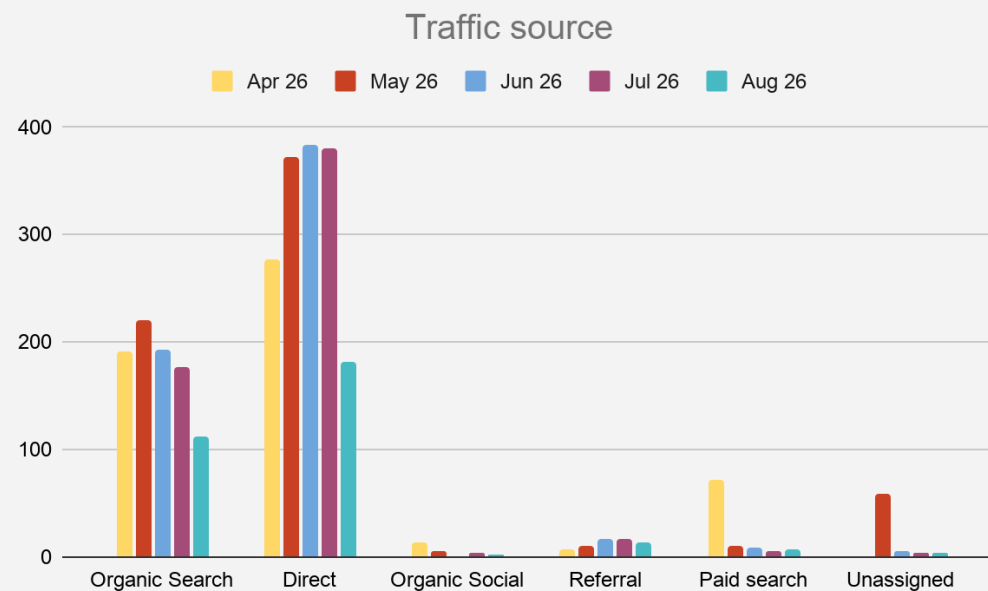

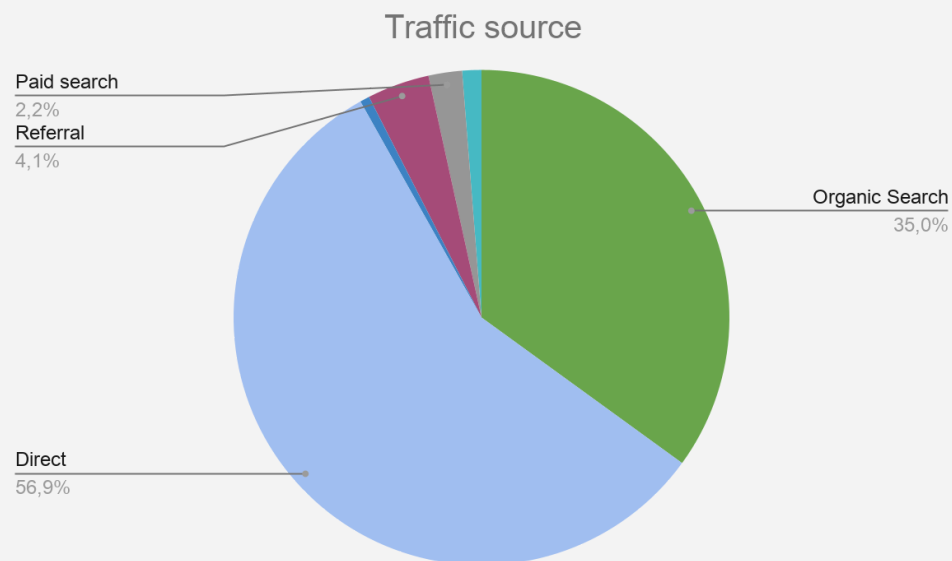

Note: the figures for the current month are compared with those for the previous months, but also with those for the previous year over the same period (if available).

No SEO updates to the site were made in July 2026.

4 linkedIn posts were published and no newsletter was sent in August.

Google rolled out the August 2026 spam update globally between August 18 and August 21, which generated significant volatility in search results over the second half of the month.

Traffic source

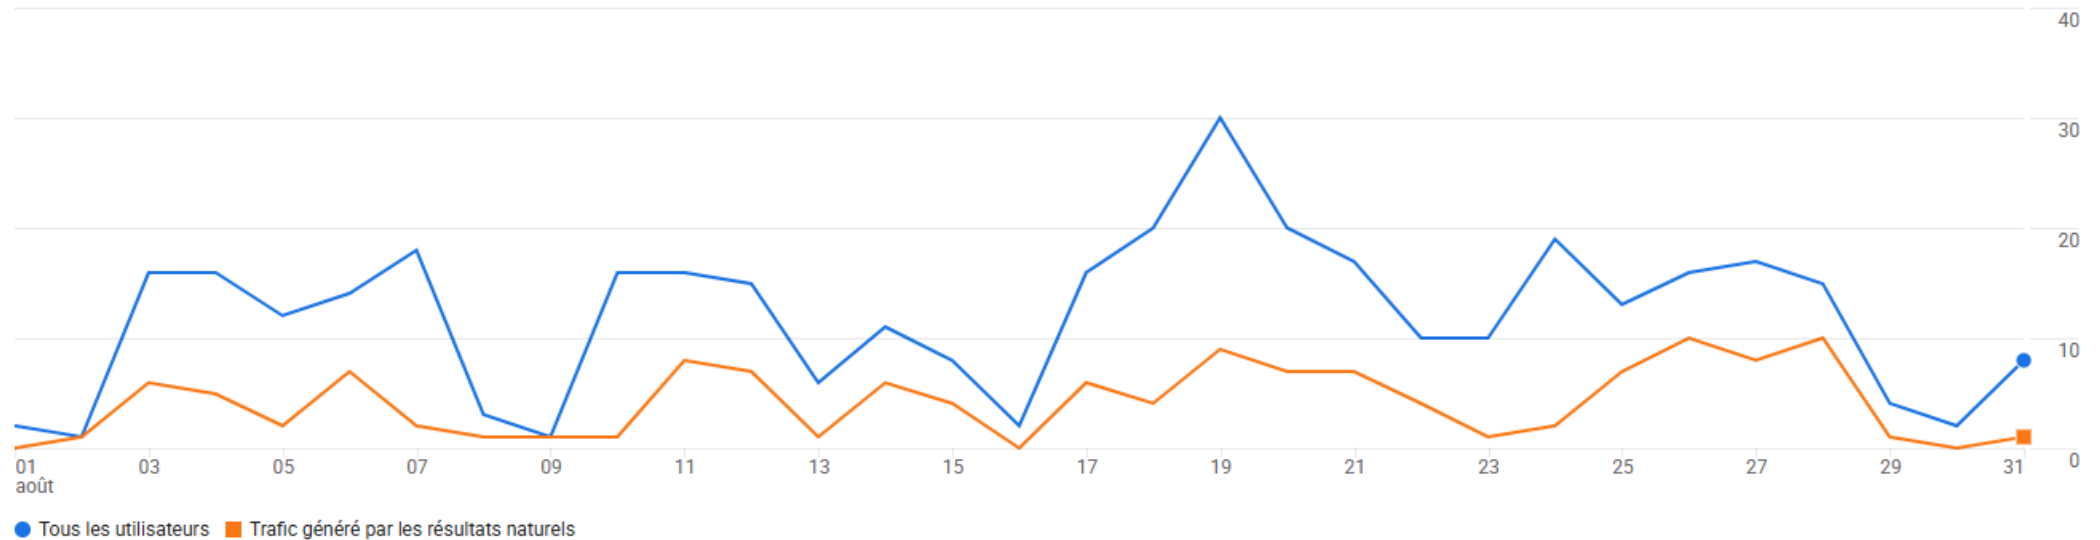

Source	Aug 26	Jul 26	Jun 26	May 26	Apr 26	Aug 25
Organic Search	112	177	193	220	191	237
Direct	182	381	384	372	277	171
Organic Social	2	3	0	6	13	0
Referral	13	16	16	10	7	9
Paid search	7	6	9	10	72	72
Unassigned	4	3	5	58	1	54

Organic clicks vs. all clicks over the month (per day)

Vues au fil du temps

Jour ▼

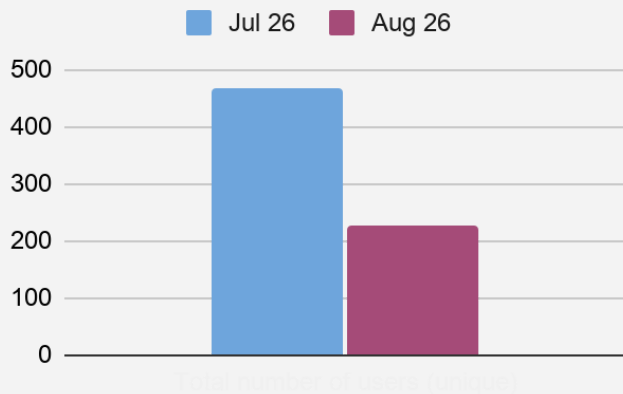

📌 Notes :

- **Organic search** decreased sharply to 112 sessions (-37% vs July, -53% vs August 2025).
- **Direct traffic** halved to 182 sessions (-52% vs July) but remains above last year's level (+6% vs August 2025).
- **Organic social** stayed marginal with 2 sessions.
- **Referral traffic** decreased to 13 sessions (-19% vs July) but remains above August 2025 (9 sessions).
- **Paid search** remained residual with 7 sessions.
- **Unassigned traffic** remained very low (4 sessions).
- **Channel mix**: organic search now accounts for 35% of all sessions (30% in July), while direct remains the first channel with 57% (65% in July).

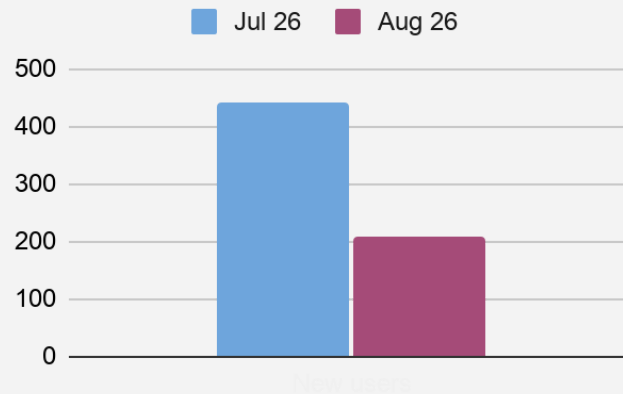

👉 **Key takeaway:** August recorded a marked drop in overall traffic (-45% vs July), with direct traffic alone accounting for around three quarters of the decline. The fall affects every acquisition channel at the same time, which is the signature of a drop in demand rather than of a technical or ranking issue: August is the main holiday period for the industrial sector. Organic and direct search remain the two main acquisition channels. September will be the month able to confirm the return to a normal level of activity.

User behavior

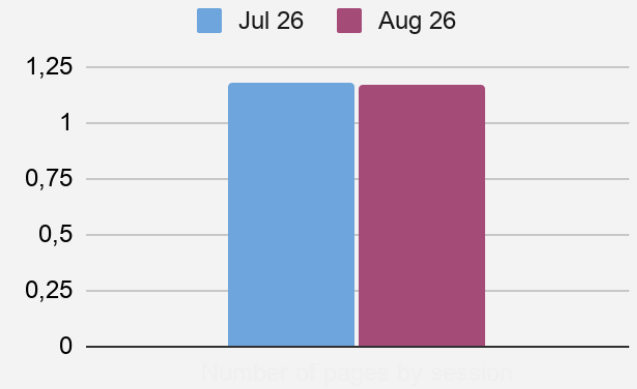

Total number of users (unique)

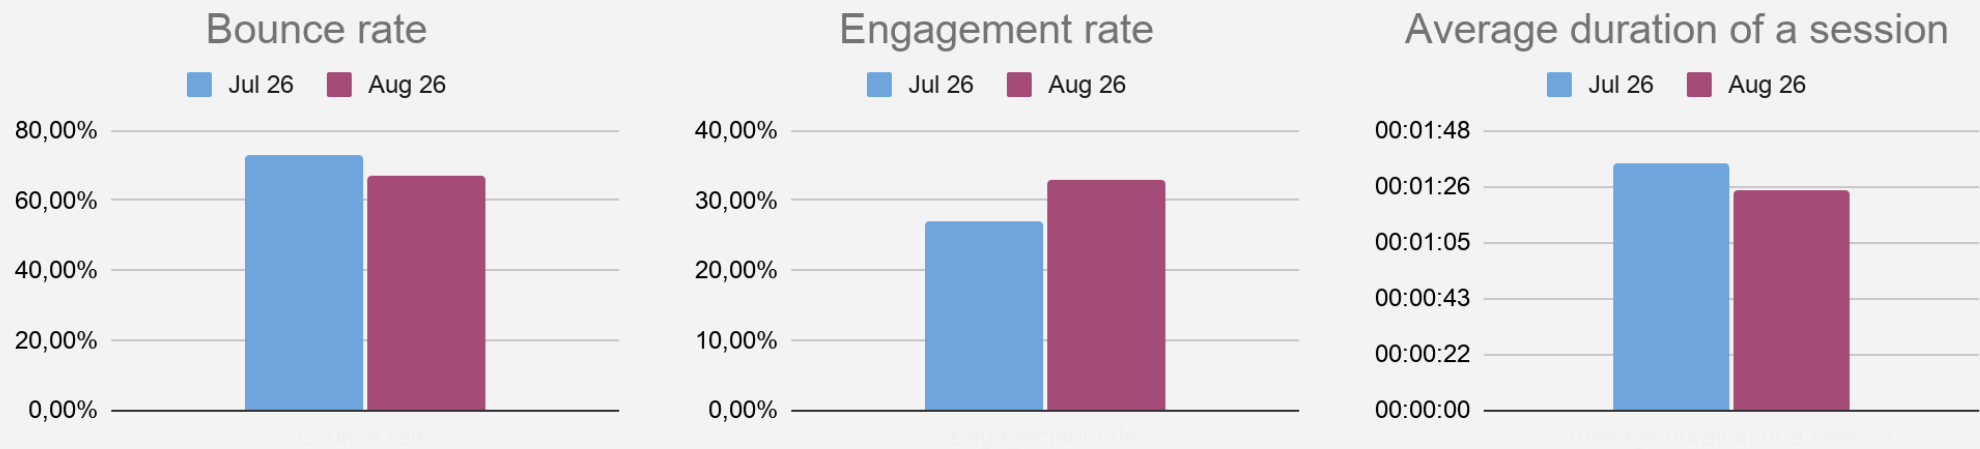

New users

Number of pages by session

KPI	Aug 26	Jul 26	Jun 26	May 26	Apr 26	Aug 25
Total number of users (unique)	225	466 (-52%)	473 (-52%)	525 (-57%)	407 (-45%)	432 (-48%)
New users	207	441 (-53%)	450 (-54%)	501 (-59%)	377 (-45%)	356 (-42%)
Number of sessions	320	586 (-45%)	607 (-47%)	677 (-53%)	562 (-43%)	545 (-41%)
Number of pages by session	1,17	1,18 (-1%)	1,23 (-5%)	1,10 (6%)	1,40 (-16%)	1,20 (-3%)
Bounce rate	67,19%	73,04% (-5,85)	67,55% (-0,36)	70,01% (-2,82)	64,23% (2,96)	64,59% (2,60)
Engagement rate	32,81%	26,96% (5,85)	32,45% (0,36)	29,99% (2,82)	35,77% (-2,96)	35,41% (-2,60)
Average duration of a session	0:01:25	0:01:35 (-0:00:10)	0:01:25 (0:00:00)	0:01:22 (0:00:03)	0:03:14 (-0:01:49)	0:01:57 (-0:00:32)

📌 Notes :

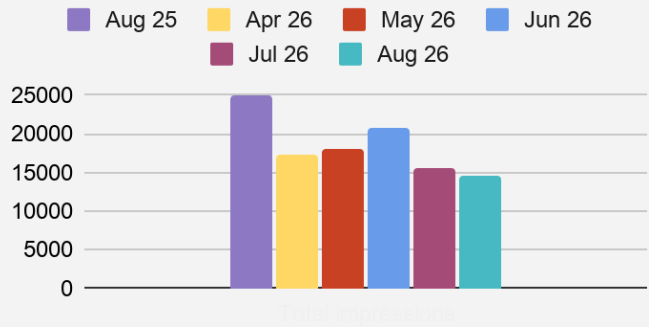

- **Users (total and new)** dropped to 225 and 207 respectively (-52% and -53% vs July).

- **Sessions** decreased to 320 (-45% vs July).
- **Pages per session** remained stable at 1.17 (-1%).
- **Engagement rate** improved to 32.81% (+5.85 points vs July), back to its June level.
- **Session duration** decreased slightly to 1:25 (-10 seconds vs July).

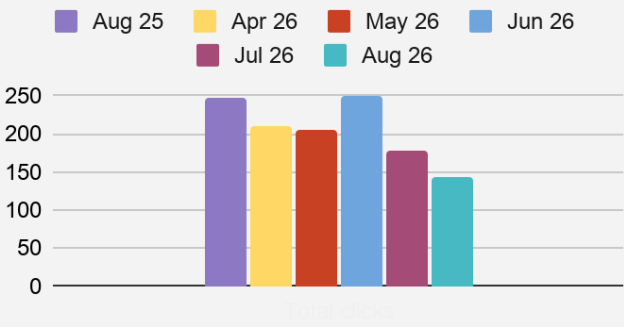

👉 **Key takeaway:** fewer visitors came to the site in August, but those who did were more engaged — the engagement rate gained almost 6 points while pages per session and session duration remained broadly stable. This is consistent with a holiday month: occasional traffic disappears first, while the professionals looking for a specific technical answer keep coming. With 92% of users being new and only 1.17 pages viewed per session, the structural priority remains unchanged: turning single-page visits into deeper journeys through internal linking and clearer calls to action.

SEO Performance Summary

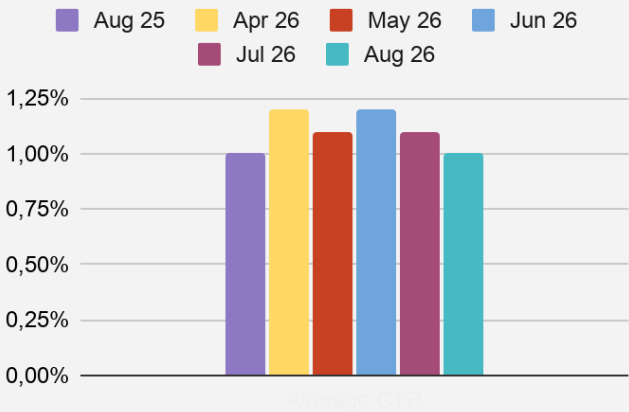

Total impressions

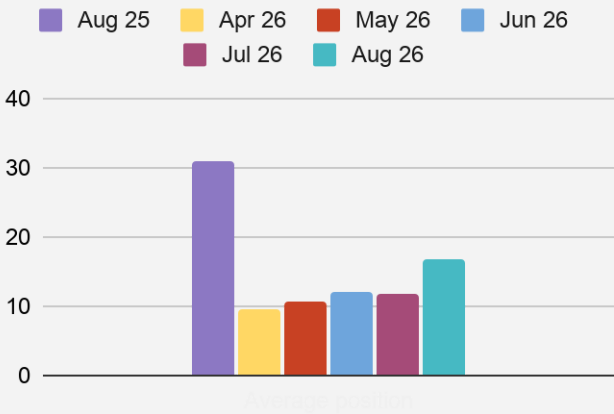

Total clicks

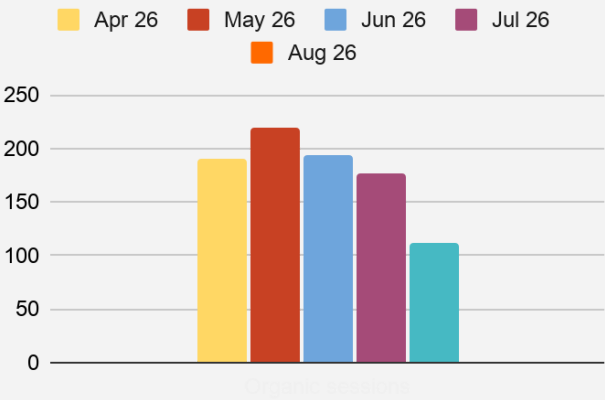

Average CTR

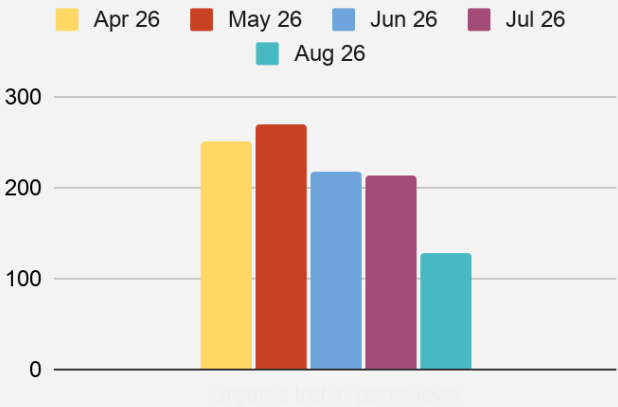

Average position

Organic sessions

Organic traffic pageviews

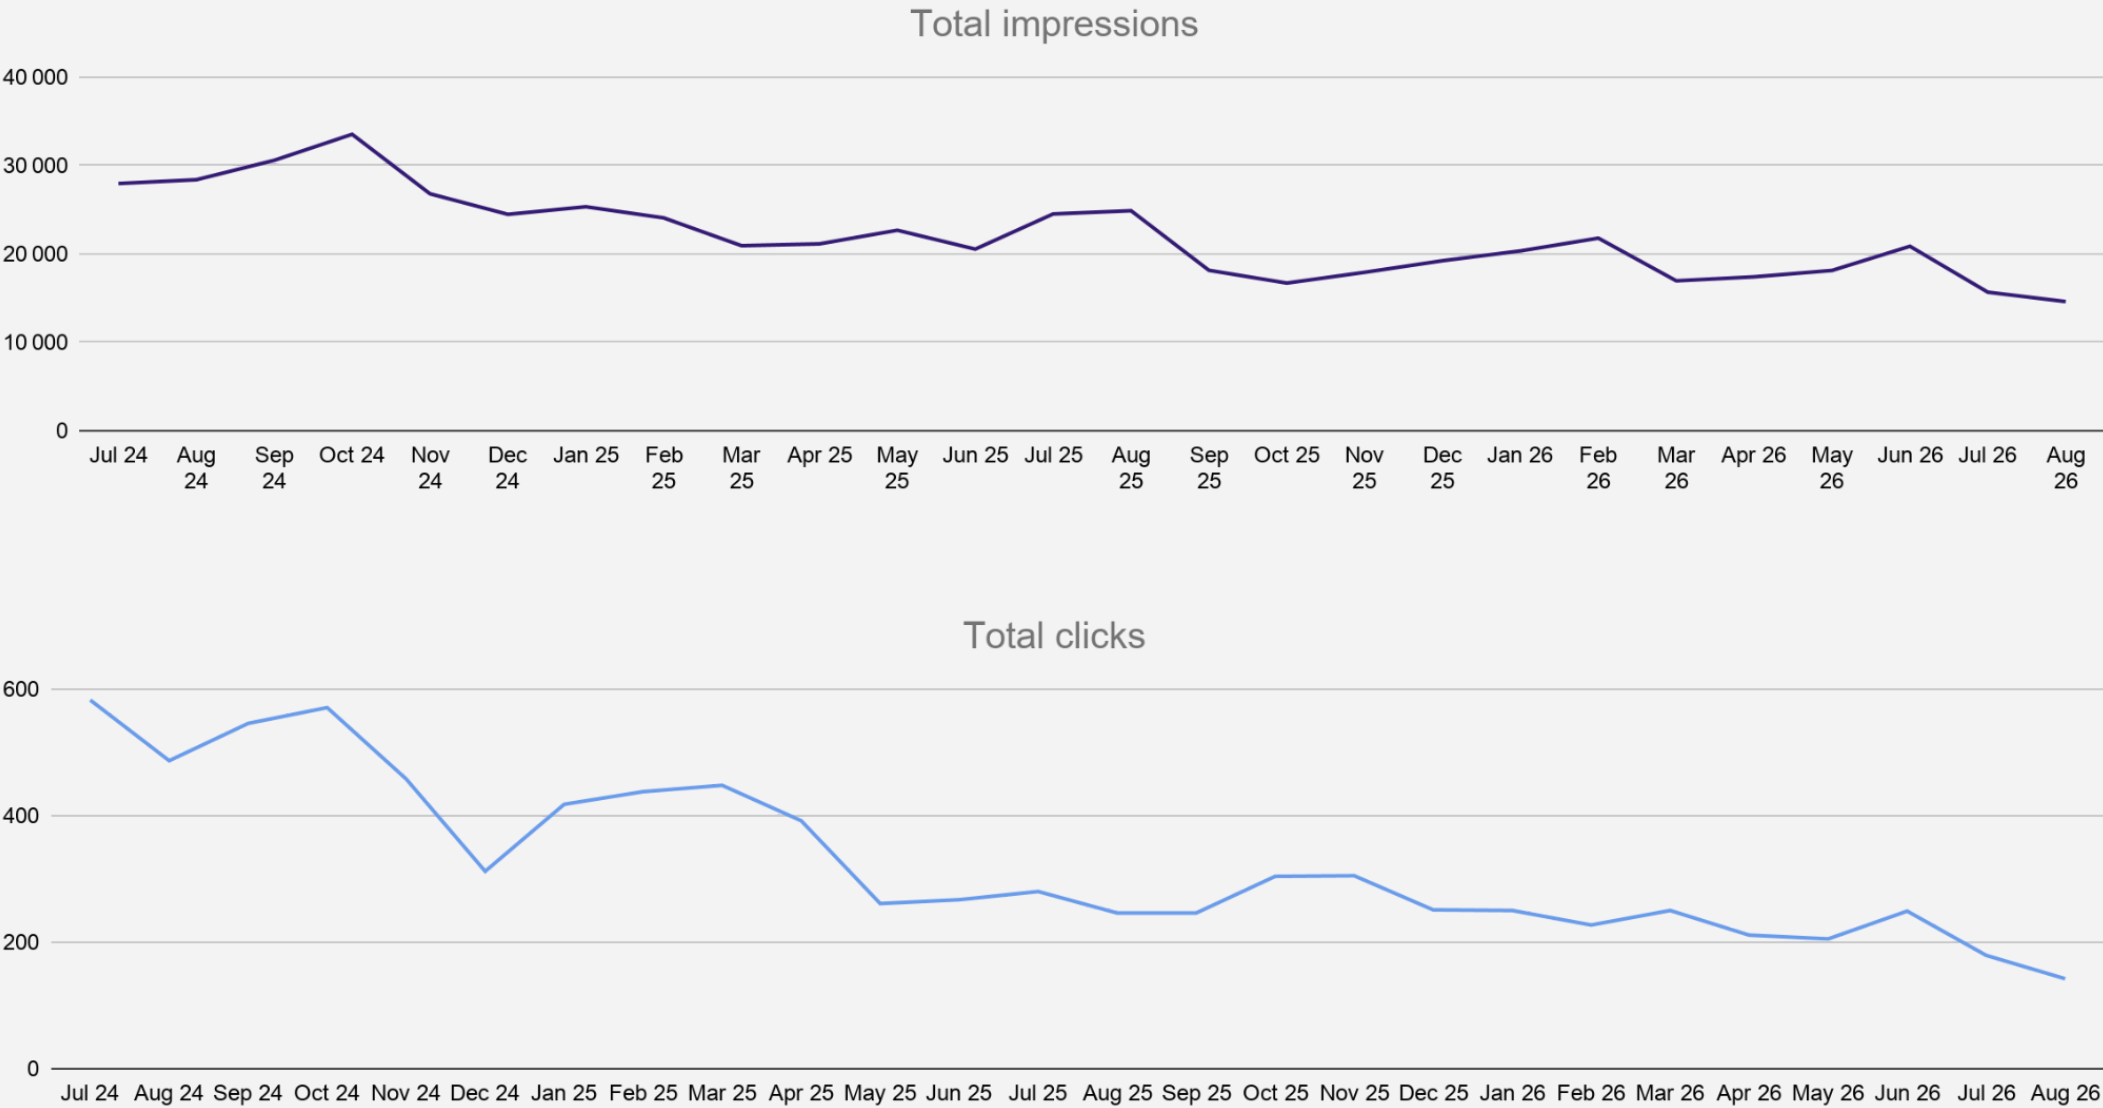

KPI	Aug 26	Jul 26	Jun 26	May 26	Apr 26	Aug 25
Total impressions	14 592	15 658 (-7%)	20 858 (-30%)	18 121 (-19%)	17 396 (-16%)	24 888 (-41%)
Total clicks	142	179 (-21%)	249 (-43%)	205 (-31%)	211 (-33%)	246 (-42%)
Average CTR	1,00%	1,10% (-9%)	1,20% (-17%)	1,10% (-9%)	1,20% (-17%)	1,00% (0%)
Average position	17	12 (41%)	12 (38%)	11 (56%)	10 (75%)	31 (-46%)
Organic sessions	112	177 (-37%)	193 (-42%)	220 (-49%)	191 (-41%)	237 (-53%)
Organic traffic pageviews	129	213 (-39%)	218 (-41%)	271 (-52%)	251 (-49%)	286 (-55%)

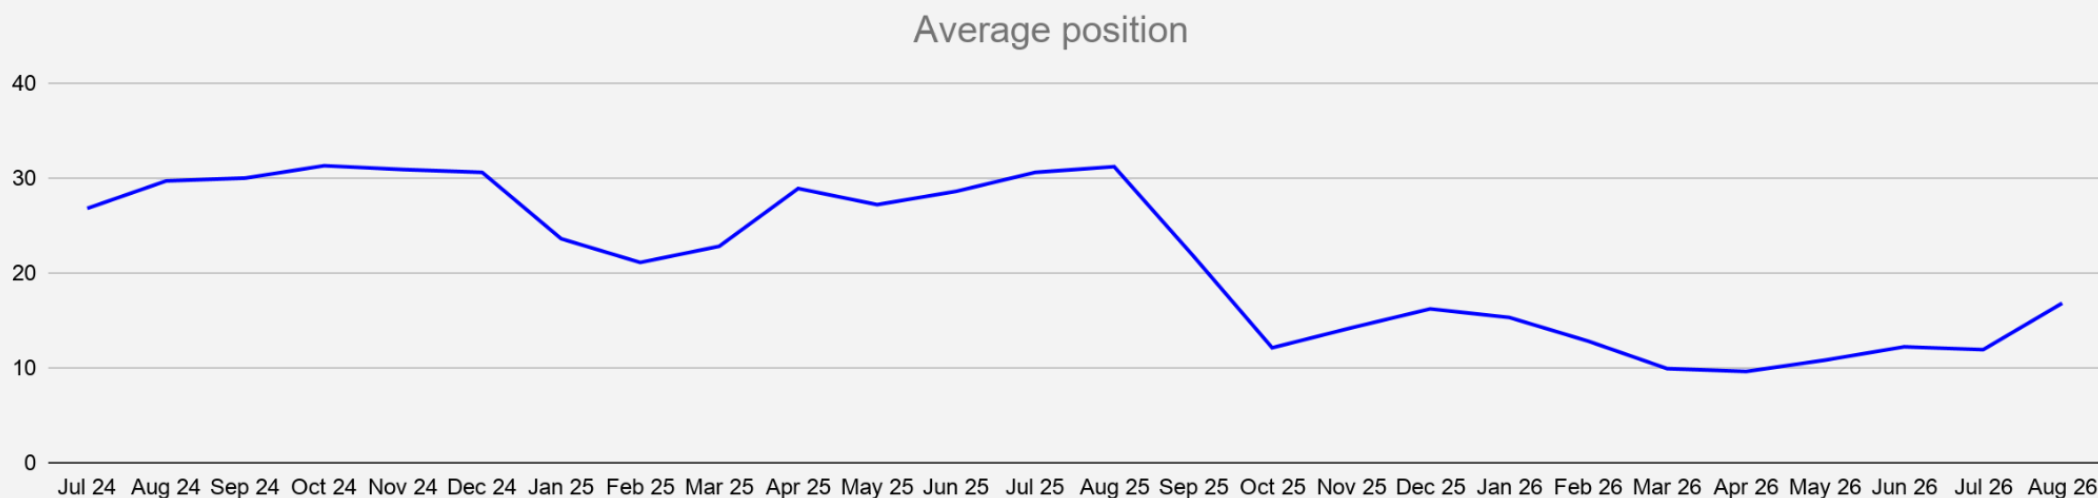

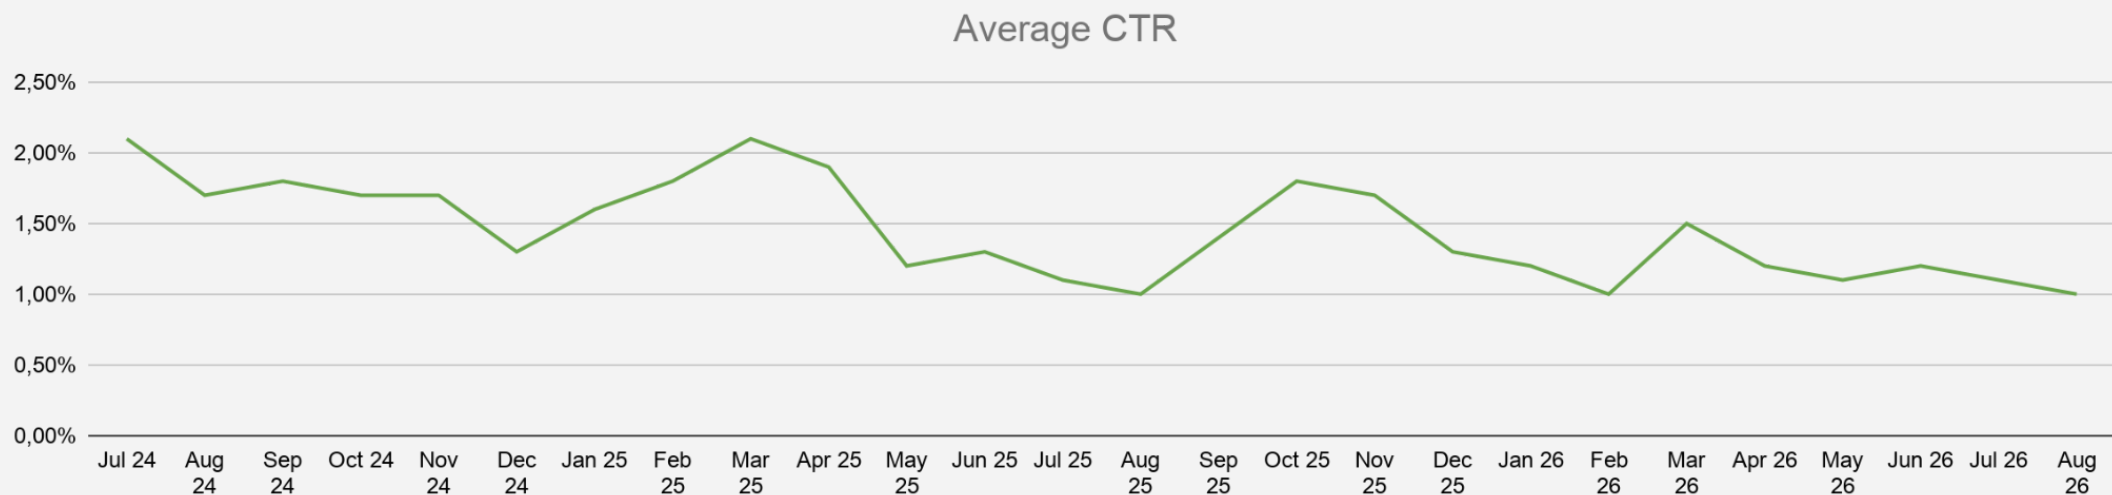

Notes :

- **Impressions** decreased to 14 592 (-7% vs July).
- **Clicks** decreased to 142 (-21% vs July).
- **CTR** slipped to 1.00% (-0.1 point vs July).
- **Average position** deteriorated to 17, against 12 in July and 10 in April.
- **Organic sessions** decreased to 112 (-37% vs July).
- **Organic pageviews** decreased to 129 (-39% vs July).

 **Key takeaway:** impressions held up (-7%) while clicks fell twice as fast (-21%). The gap comes from ranking, not from exposure: the average position moved from 12 to 17 and has been deteriorating continuously since April. The August 2026 spam update, rolled out between 18 and 21 August, may have contributed to it, but the trend started well before the summer. This is the indicator to monitor in September.

SEO Performance Evolution

👉 **Key takeaway:** the long-term view separates what is seasonal from what is not. Impressions and clicks are at their lowest point of the period, but the decline has been gradual month after month rather than sudden, which points to a slow erosion of exposure rather than to a penalty. The average position follows its own trajectory: after a marked improvement between autumn 2025 and spring 2026, it has been deteriorating since April, from 10 to

17. Two priorities emerge for the autumn: confirming the post-summer recovery in traffic, and halting the erosion of the average position while converting the existing impression base into clicks on technical queries that generate high exposure and almost no traffic.

i Major Google algorithm updates over the last 12 months:

February 2026 — Discover core update (Feb 5 to Feb 27): the first core update dedicated exclusively to the Google Discover feed. No direct impact expected on a B2B technical site.

March 2026 — spam update (Mar 24-25) and **core update** (Mar 27 to Apr 8): the first broad core update of the year, centred on content quality and E-E-A-T signals. No new ranking signal was introduced; what changed is the way each page is weighed against the other candidates for a given query.

May 2026 — core update (May 21 to Jun 2): the second core update of the year, with high volatility throughout the rollout. This period coincides with the start of the erosion in the site's average position (10 in April, 11 in May, 12 in June, 17 in August).

June 2026 — spam update (Jun 24-26) and **August 2026 — spam update** (Aug 18-21): two standard updates targeting practices already covered by Google's spam policies — content produced at scale, automated or copied content, link schemes. No new rule was introduced, but third-party trackers measured unusually high volatility during the August rollout.

Consequences for orslabs.fr: the site does not use any of the practices targeted by these updates. A spam update nevertheless moves competitors as well: when pages leave or enter the results for a given query, the site's average position changes without anything having changed on the site itself. This most likely explains part of the August variation.

Top performing organic queries

Top 10 keywords driving clicks

Most frequent queries driving clicks	Clicks	Impressions	CTR	Position
gross leak test	2	247	0,8 %	8,3
orslabs	2	159	1,3 %	12
moisture calculator	2	59	3,4 %	7,3
gross leak bubble tester	1	300	0,3 %	17,8
oneida research services	1	253	0,4 %	8,2
relative humidity to ppm calculator	1	15	6,7 %	4,3
oneida recherche services	1	11	9,1 %	1,8
relative humidity to ppm	1	10	10 %	2,6
ors lab	1	9	11,1 %	4,1
hermeticity	0	764	0 %	5,9

Top 10 keywords driving impressions

Most frequent queries driving impressions	Clicks	Impressions	CTR	Position
hermeticity	0	764	0 %	5,9
gross leak bubble tester	1	300	0,3 %	17,8
oneida research services	1	253	0,4 %	8,2
gross leak test	2	247	0,8 %	8,3
ors labs	0	212	0 %	15
orslabs	2	159	1,3 %	12
ors france	0	84	0 %	18
internal vapor analysis	0	79	0 %	13,5
hr-iva testing	0	79	0 %	15,7
iva testing	0	79	0 %	64,5

Notes :

- Search performance continues to be driven by a combination of branded searches and highly specialised technical queries.
- **“Gross leak test”** remains the main non-branded query driving clicks, with 2 clicks and 247 impressions at position 8.3.
- **“Gross leak bubble tester”** generates significant exposure (300 impressions) but ranks only at position 17.8, at the bottom of page two.
- **Humidity conversion queries** came back into the top 10 with excellent positions: “relative humidity to ppm” (position 2.6, CTR 10%) and “relative humidity to ppm calculator” (position 4.3, CTR 6.7%).
- **Branded queries** (“oneida research services”, “ors labs”, “orslabs”, “ors france”) generate around 700 impressions for only a handful of clicks, at average positions between 8 and 18: the site does not currently dominate its own brand SERP.
- **IVA queries** (“internal vapor analysis”, “hr-iva testing”, “iva testing”) each generated 79 impressions with no click, at positions ranging from 13.5 to 64.5 — a topic on which the site is visible but not yet competitive.

 **Key takeaway:** ORS Labs continues to perform best on highly targeted technical searches and branded queries, but a large share of its visibility is never converted into visits. Two levers stand out for the coming months: reworking titles and meta descriptions on the pages targeting high-impression queries, and securing the brand SERP, where the site ranks below position 8 on several variations of its own name.

Most visited pages via natural referencing

Most popular pages	Clicks			Impressions			CTR			Position		
	Aug 26	Jul 26	Difference	Aug 26	Jul 26	Difference	Aug 26	Jul 26	Difference	Aug 26	Jul 26	Difference
/en/tools/moisture-calculator/	55	56	-1	5 458	5 245	213	1 %	1,1 %	-0,1 %	18,4	11,4	7
/outils/conversions-dhumidite/	36	46	-10	857	1 075	-218	4,2 %	4,3 %	-0,1 %	8,5	7,3	1,2
/en/hermeticity/gross-leak-test/	7	11	-4	1 159	1 154	5	0,6 %	1 %	-0,3 %	16,1	9,7	6,4
/	6	13	-7	85	217	-132	7,1 %	6 %	1,1 %	13,8	15,8	-2
/en/resources/literature/	4	0	4	132	76	56	3 %	0 %	3 %	15,4	12,7	2,6
/en/hermeticity/hshld-high-sensitivity-helium-leak-detection/	3	1	2	376	329	47	0,8 %	0,3 %	0,5 %	11,6	11	0,6
/pdf/ORS France - Interpretation of RGA Data.pdf	3	4	-1	190	216	-26	1,6 %	1,9 %	-0,3 %	16,9	14	2,9
/en/tools/howl-mann-equation/	3	1	2	150	113	37	2 %	0,9 %	1,1 %	9,9	11,1	-1,1
/wp-content/uploads/2019/03/ORS-SOP_MEL1053.pdf	3	2	1	35	57	-22	8,6 %	3,5 %	5,1 %	8,4	16,8	-8,5
/en/	2	2	0	842	953	-111	0,2 %	0,2 %	0 %	6,4	5,2	1,2

Notes :

- The **English Moisture Calculator** page remains the site's main entry point with a stable number of clicks and impressions, even though its average position declined by 7 places.
- The **French Humidity Conversion** page is the second traffic driver, despite a slight decrease in clicks and impressions.
- Together, these **two tool pages generate 91 of the 142 organic clicks** recorded in August, i.e. 64% of the site's organic traffic.
- **3 pages increased their clicks**: /en/resources/literature/ (+4), /en/tools/howl-mann-equation/ (+2) and the HSHLD page (+2).
- **Technical PDF documents** remain visible in organic search. ORS-SOP_MEL1053 records the best CTR of the table (8.6%).

👉 **Key takeaway:** impressions held up on the main pages (9 284 against 9 435 in July), but 7 of the 10 lost ground in the rankings, including the 3 biggest click drivers. The pages are still being displayed, simply lower in the results — and that is where the clicks were lost.

Conclusion

August shows a marked slowdown across all indicators. Sessions fell by 45% compared with July, with direct traffic alone accounting for around three quarters of the decline, and organic sessions decreased by 37%. All the main acquisition channels fell at the same time, while the engagement rate improved, which points to a holiday effect on overall demand. The organic decline, however, has a cause of its own: impressions on the main landing pages stayed at their July level, so the clicks were lost to a drop in rankings rather than to a drop in demand.

The nature of the decline has also changed since July. In July, rankings were stable and the issue was reduced exposure; in August it is the opposite. The average position moved from 12 to 17 and has been deteriorating since May 2026, CTR slipped to 1.00%, and clicks fell twice as fast as impressions. Both impressions (14 592) and clicks (142) are at their lowest monthly level over the whole period covered in this report. The August 2026 spam update, rolled out between 18 and 21 August, generated significant volatility in search results over the second half of the month, but the trend started well before the summer.

Several indicators nevertheless moved in the right direction. The engagement rate improved by almost 6 points to 32.81%, impressions held up on the main landing pages, and a few pages gained ground in the rankings. The audience was smaller in August, but more engaged.

The analysis of queries and landing pages confirms two structural findings. First, organic traffic is highly concentrated: the two humidity calculator pages alone generate 64% of all organic clicks. Second, a significant share of the visibility is never converted into visits — the English home page, for instance, recorded 842 impressions for a 0.2% CTR. Closing this gap does not require new content: it requires reworking pages that already rank.

The performance of the technical PDF documents remains mixed, but several continue to generate meaningful organic visibility. This supports the existing strategy of identifying the most promising PDFs and progressively transforming them into optimized HTML landing pages, in order to make better use of existing expert content, strengthen internal linking and convert existing search visibility into additional qualified traffic.

Overall, August combines a seasonal drop in overall traffic with a loss of rankings.

👉 **Strategic priorities** for the coming months:

- **Improve CTR** on the pages and queries that already generate impressions.
- **Secure the brand SERP**: the site should rank first on every variation of its own name.

- **Monitor the erosion of the average position** and identify which queries are gaining impressions at deep positions.
- **Strengthen internal linking** from the two calculator pages towards the service and contact pages, to lift pages per session above 1.17.
- **Continue optimizing** high-performing tool pages.
- **Leverage technical PDF content** by transforming key documents into optimized landing pages integrated within the site architecture.

👉 Actions:

- Publish the proposed content (sent in December) on /outils/conversions-dhumidite/ page (french and english versions) — Status: paused, waiting approval from ORS Labs.
- Rework content of the /tests-dhermeticite/hshld/ page based on the new proposed structure — Status: paused, waiting structure approval from ORS Labs.
- Identify high-visibility PDF documents and prioritize their conversion into structured HTML pages to enhance SEO impact and lead generation potential: we could start with Variable_leak_rate_phenomena_in_glass_to_metal_seals.pdf if you agree with the proposition. — Status: paused, waiting approval from ORS Labs regarding the proposal.
- Publish to proposed meta data for Gross Leak Test page — Status: paused, waiting approval from ORS Labs.

Glossary

SEO (Search Engine Optimization): Set of techniques aimed at improving a website's visibility in search engine results.

SERP (Search Engine Results Page): The page displayed by search engines (Google, Bing, etc.) showing results in response to a query.

Internal linking: The organization of a website's internal links that connect different pages together to improve navigation and search engine indexing.

Crawl: The process by which search engine bots browse and analyze a website's pages to decide whether or not to add them to their index.

Indexable: Describes a page that can be added to a search engine's index and therefore appears in search results. A non-indexable page will not be shown in the SERP.

Backlinks: Inbound links coming from other websites and pointing to a given site.

Impressions: The number of times a link appears in search engine results, regardless of whether it is clicked or not.

CTR (Click-Through Rate): The percentage of users who clicked on a link compared to the total number of impressions of that link in the SERP.

PAA (People Also Ask): A section in Google results displaying frequently asked questions related to the query, with answers from various websites.

Canonical URL: The canonical URL indicates which version of a page should be considered as the main one by search engines. It helps prevent duplicate content issues when multiple pages have very similar content.
